

CURRICULUM VITAE

• Personal Details

Name: Gabby Sarusi

Work Address and Telephone:

Electro-optic and Photonics Engineering Unit and Ilsa Katz Institute for Nano-Scale Science, Ben-Gurion University of the Negev Bld. 51 Office:228 Labs: 225&227.

P.O. Box 653 Beer-Sheva, 8410501, Israel. Tel. +972-8-6428631

Cellphone: +972-54-9993399

Web. Site: <http://in.bgu.ac.il/en/engn/electrop/gserg/Pages/default.aspx>

Current Position: Full Professor, Deputy for Research – School of Electrical and Computer Engineering, Photonics and Electrooptics Dept. Ben-Gurion University of the Negev.

• Education

B.Sc. 1981-1985: Ben-Gurion University of the Negev, Department of Nuclear Engineering – **Graduated Cum Laude.**

Name of advisor: Prof. Gad Shani

Title of project: Computerized Radiography of Fast Neutrons. (Best university project prize)

B.Sc. - 1981-1985: Ben-Gurion University of the Negev, Department of Material Engineering – **Graduated Cum Laude.**

Name of advisor: Prof. Joseph Baram and Dr. Igal Gefen

Title of project: Acoustic emission in Cu/Gd Alloys.

M.Sc. 1985 -1987: Tel Aviv University, Department of Electrical Engineering – Physical Electronics – **Graduated Cum Laude.**

Name of advisor: Prof. Yoram Shapira (TAU) and Dr. Ami Zemel (Soreq-NRC)

Title of thesis: Electrical and optical properties of Cu and Au doped HgCdTe epitaxial layers grown by LPE.

Ph.D. 1988 -1992: Tel Aviv University, Department of Electrical Engineering – Physical Electronics.

Name of advisor: Prof. Yoram Shapira (TAU) and Dr. David Eger (Soreq NRC)

Title of thesis: Investigation of the properties of narrow bandgap IR photodetectors based on epitaxial layers of HgCdTe

Postdoc.: 1992 – 1994: AT&T Bell Labs. (Lucent) Murray Hill N.J. USA

Name of advisor: Dr. Barry F. Levine

Working on: Quantum Wells Infrared Photodetectors (QWIP) for very long wavelength infrared.

Executive MBA 2000 – 2001: Tel-Aviv University, Recanati School of Business, Department of Business Administration

Employment History

1. March 2018 to present: Full Professor, Researcher.
Ben-Gurion University of the Negev, Unit of Electro-Optics and Photonic Engineering, School of Electrical and Computers Engineering and Ilse Katz Institute for Nano-Science and Technologies.
2. March 2012 to February 2018: Associate Professor, Researcher.
Ben-Gurion University of the Negev, Unit of Electro-Optics and Photonic Engineering, School of Electrical and Computers Engineering and Ilse Katz Institute for Nano-Science and Technologies.
3. January 2011 to February 2012: V.P., CTO at Elbit-Elop
4. 2006-2011: V.P., Head of Space and air Imagery intelligence division at Elbit-Elop
5. 2001-2006: V.P., Chief Scientist. Elbit- Elop
6. 1995-2001: Director R&D, Thermal Imaging Systems Development
7. 1994-1995: Research Consultant, NASA – JPL, Pasadena, CA, USA
8. 1992-1994: Post doc. at AT&T Bell Labs. Murray Hill, N.J. USA
9. 1986-1992: Student Researcher – Soreq NRC, Yavne, Israel.
In parallel with my M.Sc. and Ph.D. studies at Tel-Aviv University.
10. 1985-1986: Development Engineer, Microelectronics, Holon, Israel
11. 1984-1985: Associate Student Researcher at R&D institutes of Ben-Gurion University

Professional Activities

(a) Positions in academic administration

- a. 2012 to present: Co-Founder and Ben-Gurion University's representative of the Israeli Photonic Center established by Soreq NRC and Ben-Gurion University
- b. October 2014 to September 2017: Member in the BGU Senate
- c. 2014 to present: A BGU representative of the stirring committee of the Caraso science park, Beer-Sheva, Israel
- d. 2013 to present: The Academic Head of the Jusidman science center for youth at Ben-Gurion University of the Negev.
- e. 2014-2017: Member of the EduNano – European commission program, BGU representative for online study of nano-scale sciences.
- f. 2015: Leading the "Unesco 2015-year of light BGU activities"
- g. 2013 to present: Member of the stirring committee of the Ilsa Katz nano-science center at BGU
- h. 2018 - Academic head of the SPIE student chapter
- i. 2017- 2018 Steering committee and lecturer in Pei'ma project BGU and IAI

(b) Professional functions outside universities/institutions

Elbit- Elop: Director of development groups of advanced thermal imaging systems.

I was supervising around 70 physicists and development- engineers. Outcome product of this generic development:

1. TADES technology (480X4 TDI MCT) for gunner thermal imaging system for the Israeli main battlefield tank – Merkava, and the main thermal imager system for Israeli UAVs.
2. Development of dual band NIR and LWIR QWIP detector for thermal imaging and 1.06micron laser see-spot applications.

3. Un-cooled thermal imaging systems for a tank driver and as a head mounted systems for soldier.
4. Hand held thermal imaging systems.

2001-2006 Elbit-Elop:

Vice President, company's chief scientist:

1. In charge of the technology and scientific strategy of the company.
2. Launching new electro-optics development programs (as well as two MAGNET consortia – MOEMS – Micro Optical Electrical and Mechanical system and BMP – Bio Medical Photonics.
3. Scouting for new technologies in the academia and in startup companies.
4. Leading technological M&As.
5. Establishing company's stat-ins: developing leading edge top-secret electro-optical intelligence systems.
6. Company's representative on the board of director of the daughter companies: SCD and OPGAL

2006-2011: Elbit-Elop:

Vice president, Head of Air and Space Imagery Intelligence Division:

Head of division that includes 3 business units (around 450 peoples), business of 150M\$, annually:

1. Space Satellites Cameras: Space satellites camera systems – main systems development: Ofeq-7, Ofeq-9 and Ofeq-11 The Israeli spy satellites cameras. Venus satellite multispectral camera – VIS-NIR-SWIR.
2. Aerial Photography: Main systems development: Airborne long range oblique photography (LOROP) and vertical photography systems for F-15, F-16, Mig-25.
3. Hyperspectral remote observation systems: Main systems development: Airborne Hyperspectral Systems in the VIS-NIR-SWIR spectral range. The system name is "Chariots of Fire" and is in now full operation.

2004-2014 Medigus Ltd.:

Board member and head of financial committee

2012-2016 Imagine – Mobile Augmented Reality Ltd:

Co-founder of Imagine- mobile augmented reality Ltd. – a start-up company

2013-2015:

Member of the Space National R&D Committee (MOLMOP)

2014-present NSC Ltd and TechSee Ltd.:

Co-founder of NSC Ltd. and TechSee – augmented vision Ltd. – startup companies

October 2014 - September 2017 IAI Ltd.:

Board member at IAI – Israel Aircraft Industries.

(c) **Significant professional consulting:**

1994: NASA-JPL, Pasadena, CA, USA

Very long wavelength quantum wells based focal plane arrays and cameras.

- (d) **Editor or member of editorial board of scientific or professional journal**
Journal of Imaging Science and Technology (JIST), 2014-2015, Guest editor
Journal of Infrared Physics and Technology 2016-present, Guest editor
- (e) **Ad-hoc reviewer for journals**
Applied Physics Letters (APL)
Journal of imaging science and technology (Also guest editor)
Journal of infrared physics and technology (Also guest editor)
- (f) **Membership in professional/scientific societies**
2001-2017, SPIE
2001-2010, IEEE

• **Educational activities**

- (a) **Courses taught since March 2012 to present:**
- "Fundamental of Semiconductors and Devices" for graduate students at Ben-Gurion University of the Negev.
 - "Semiconductors Optoelectronic Devices" for graduate students at Ben-Gurion University of the Negev.
 - "Advanced Topics in Photonics and Electro-optics" for graduate students at Ben-Gurion University of the Negev.

Note: I have been an external lecturer at BGU between 2002 and 2007 teaching Semiconductors Optoelectronic Devices Course

(c) **Research Ph.D and M.Sc. Students (with thesis) Supervision:**

Graduated Students:

1. Noam Cohen, Ph.D. Graduated 2008 HUJI (Jointly with Prof. Amir Sa'ar from HUJI) – when I was at Elop-Elbit
2. Nadav Carmel, M.Sc. Graduated 2014, BGU
3. Elad Hechster, M,Sc. Graduated 2014, BGU
4. Vladimir Witenberg, M.Sc. Graduated 2015, BGU
5. Rachel Faig-Matityahu, M.Sc. Graduated 2015, BGU
6. Viki Michael-Magen, M.Sc. Graduated 2015, BGU
7. Nimrod Guy Nissim, M.Sc. Graduated 2015, BGU
8. Idan Bark, M.Sc. Graduated 2015, BGU (Jointly with Dr. Rafi Shikler)
9. Itai Kadosh, M.Sc. Graduated 2015, BGU
10. Matan Arbel M.Sc. Graduated 2016, BGU
11. Amir Tal, M.Sc. Graduated 2016, BGU (Jointly with Dr. Iris Visoly-Fisher)
12. Maxim Khabad M.Sc. Graduated April 2017 (Jointly with Prof. Ytzchak Ytzchaky)
13. Elad Hechster, Ph.D. Graduated Dec. 2018
14. Israel Hory – M.Sc. Graduated November 2019
15. Arie Grossman – M.Sc. Graduated March 2020
16. Chen Klain, - Ph.D. Graduated March 2020
17. Rudrarup Sengupta – M.Sc. Graduated September 2020
18. Hadar Manis-Levi, - Ph.D. Graduated September 2020 (Jointly with Prof. Rafi Shikler)

Active Ph.D. students:

19. Rudrarup Sengupta – Ph.D. Started October 2020

20. Nissim Cohen, Ph.D. started October 2013 (On hold since March 2016 until September 2018, personal reasons)
21. Maxim Khabad – Ph.D. started April 2017 (Jointly with Prof. Ami Ishaaya)

Active M.Sc. Students:

22. Adi Paz - M.Sc. started October 2019

Supervised M.Sc. Student without thesis (Graduated):

23. Victor Golan M.Sc. graduated 2014
24. Zeev Friedkin M.Sc. graduated 2014
25. Ido Krabol M.Sc. graduated 2015

Active M.Sc. Student without thesis:

Supervised B.Sc. final project (Graduated)

26. Shlomit Birchfield and Natali Gantts (Bio-Technology dept.)

• Awards, Citations, Honors, Fellowships

(a) Honors, Citation Awards

1. December 2015 - Beijing Information Science and Technology University (BISTU), **Honorary Professor of BISTU**

Scientific Publications

Total: Citations: 1087 (Google scholar), **h-index:**16(Google scholar), **i-10 index:**17 (Google scholar), **Research Gate Score:** 28.48

Total: Citations (Web of Science): 585, 551(without self-citations) (ISI), **h-index:** 16(ISI)

(a) Authored books

None

(b) Editorship of collective volumes

1. **Gabby Sarusi**, Anna Carbone, Sarath Gunapala and H.C. Liu, 2002, QWIP-2002, Journal of Infrared physics and Technology - special issue, Elsevier, 545 pages.
2. * **Gabby Sarusi**, Sarath Gunapala, 2017, QSIP2016, Journal of Infrared physics and Technology - special issue, Elsevier, 256 pages.

(d) Refereed chapters in collective volumes and conference proceedings

1. **Gabby Sarusi**^{PI}, “TADIR - a Second Generation 480x4 TDI FLIR” SPIE Vol. 3061 p.p. 673 (1997)
2. Boaz Brill and **Gabby Sarusi**^{PI} “QWIP Research and Development of 320x256 QWIP Arrays in El-Op” SPIE Vol. 3061 p.p. 781 (1997)

(d) Published scientific reports and technical papers-internally refereed publications
I Have many during my 17 years of work at Elop-Elbit systems.

(f) Un-refereed professional articles and publications

(g) Classified articles and reports

I have many more during my work at Elop/Elbit Systems between 1995 and 2011.

• **Lectures and Presentations at Meetings and Invited Seminars (Partial)**

(a) Invited, plenary and lectures at conferences/meetings

1. The 53rd Annual meeting. The Israeli Chemical Society 1988. Ben-Gurion University, Beer-Sheva, Israel
2. The Israeli Vacuum Society. Tenth Israeli Vacuum Congress 1990. The Hebrew University, Jerusalem, Israel.
3. The 1991 Annual Conference of the Israeli Association for Crystal and Thin Film Growth, Weizmann Institute of Science, Rehovot, Israel.
4. SPIE - The International Society for Optical Engineering, 9-13 July 1995, San Diego, California.

5. The third International conference on “Intersubband transition in semiconductors” Kibbutz Ginosar October 1995. (**Invited talk**)
6. SPIE - The International Society for Optical Engineering, 20 -25 April 1997, Orlando, Florida (**Two invited talks and a Session Chair**)
7. The Fourth International conference on “Intersubband transition in semiconductors” Tainan, Taiwan 1997. (**Invited talk+panel session**)
8. SPIE - The International Society for Optical Engineering, 20-25 July 1998, San-Diego, California (**Two invited talks and a Session Chair**)
9. SPIE - Photonic CHINA 16-19 September 1998, Beijing International Conference Center.
10. SPIE – Deheradun INDIA 16-19 December 1998, Deheradun IRDE Conference Center, **Invited talk**.
11. SPIE - The International Society for Optical Engineering, April 1999, Orlando, Florida (A presentations and a **Session Chair**).
12. SPIE - The International Society for Optical Engineering, July 2000, San-Diego, CA (A presentations and a **Session Chair**).
13. SPIE - The International Society for Optical Engineering, July 2002, Seattle, WA (A presentations and a **Session Chair**)
14. QWIP 2002 Workshop, Torino Italy October 2002, **Conference Chair and invited talk**
16. SPIE - The International Society for Optical Engineering, April 2003, Orlando, FL (Presentations and a **Session Chair**)
17. SPIE - The International Society for Optical Engineering, April 2004, Orlando, FL (Presentations and a **Session Chair**)
18. SPIE - The International Society for Optical Engineering, April 2005, Orlando, FL (Presentations and a **Session Chair**)
19. Electro-optic workshop IRDE Deheradun, India. December 2005 **Keynote speaker**
20. SPIE - The International Society for Optical Engineering, April 2006, Orlando, FL (Presentations and a **Session Chair**)
21. Yuval Nee'man conference in Tel Aviv University, 2009 Tel Aviv **Invited talk**
22. Oasis 2010, Tel Aviv Israel, Organizing Committee and **Invited talk**
23. QSIP 2012, Corsica, France, Organizing and Technical Program Committee
24. Oasis 2014, Tel Aviv Israel, Organizing Committee and **Invited talk**
25. QSIP 2014, Santa Fe, NM, USA, Technical Program Committee and a talk

26 Nano Science and nanotechnology, Xia'n, China September 2015 **Session Chair** and an **Invited talk**

27 Imagine-nano Bilbao Spain 2015 **Invited talk**

27. SPIE Photonics Europe, Brussel 2016 **Invited talk**

28. QSIP 2016, June 2016 Tel-Aviv, Israel. **Conference Chair and Invited talk**

29. Nano Science and nanotechnology, Singapore October 2016 **Session Chair** and an **invited talk**

30. Single wall carbon Nano-tube conference, OCSiAl, Novosibirsk, Russia. November 2016, **Invited talk**

31. Nano Science and Nano Technology, Fukuoka, Japan October 2017, **Invited talk and Nano-phonic session co-chair**

32. Smart future nano-materials summit, The Economist conference, Luxemburg, November 13-14, **Augmented material panel session.**

33. Nano-Augmented Material Conference, University of Luxemburg November 15-16, 2017, **Invited talk**

34. Israel machine vision conference - IMVC2018, Tel-Aviv, **Keynote invited speaker**, 6 of March 2018

35. NanoIL Jerusalem, **Chair and Speaker**, October 9-11 2018

36. OASIS-7 Tel Aviv, **Invited speaker**, April 1-2 2019

(e) Presentation of papers at conferences/meetings (oral) and proceedings

(c) Presentations at informal international seminars and workshops
Hundreds, I never have not kept a record

(d) Seminar presentations at universities and institutions (Since 2013 only)

1. Soreq NRC, Israel - March 2013
2. CNRC-Paris, France – March 2014
3. December 2015 - Beijing Information Science and Technology University (BISTU), "SWIR to visible image upconversion device" – physics and architecture
4. NTU – National University of Singapore – March 2016
5. OCSiAl Augmented Nano Material Seminar– Novosibirsk, Russia November 2016

Patents:

1. 1996, Barry F. Levine and **Gabby Sarusi**, "Quantum well photo-detector with pseudo-random reflection". **US Patent 5,506,419 USA - Granted**
2. 2011, Noel Axelrod, Amir Lichtenstein and **Gabby Sarusi**, "Multimodal Depth resolving endoscope" Application number: **20110282192**

3. 2013, Daniel Grinberg, **Gabby Sarusi**, Eli Luria, System worn by moving user for fully augmented reality by anchoring virtual objects. **US Patent 2013/0307842 A1, USA and Europe - Granted**
4. 2014, **Gabby Sarusi**, Yuval Golan "SWIR to visible image upconversion integrated device" **Granted 32518/US, EU and Canada – Granted**
5. 2014, **Gabby Sarusi**, Ibrahim Abdulhalim "SWIR to visible upconversion optical system" **PCT 32594/US/14 (National Phase)**
6. 2015, Arie Kalo, **Gabby Sarusi**, Shachar Kalo, Nir Gilboa "composition and method for three dimensional (3D) printing" **PCT/IL2015/050148 – Granted**

Research Grants:

Seven years in a row exemption of teaching one course a year as a benefit for high score in achieving grants budget and research fulfilments.

Before my arrival to Ben-Gurion University:

1. 1997-1999: Grant from the ministry of science and technology (MOST) to develop Laser see spot QWIP based IR detector. **1.2M Shekels for 3 years.**
2. 2002-2005: Founder and chairman of the MOEMS (Micro-optical-electrical-mechanical systems) – MAGNET consortium where I have established the consortium when I was the chief scientist of Elbit/Elop. Budget of **50M Skekels for 4 years.**
3. 2005-2009: Founder of the BMP (Bio-medical Photonics) MAGNET consortium, when I was the chief-scientist of Elbit/Elop. Budget of **50M Shekels for 5 years.** I transfer the chairmanship to Dr. Elisha Rabinowitz from Given-Imaging due to my new position at Elbit/Elop as the V.P. of Space and Air Intelligence Division in 2006

Since my arrival to Ben-Gurion University:

4. October 2012 to March 2017: Sum gross budget of **7.5M\$ for 4.5 years.** First research grant as a faculty at BGU.
Funded by INNI - Israel National Nanotechnology Initiative under FTA- Focal Technology Areas of the nano-technology centers.
Research Topic: "SWIR to visible integrated image upconversion device using nano-photonic and nano-plasmonic"
I came with the research idea, plan chose the PIs and led the proposal submission, and organized the research groups from BGU and other universities. Presenting to the INNI committee and running as the program leader in front of the other PIs.
BGU PIs: Gabby Sarusi (Program leader), Yuval Golan, Ibrahim Abdulhalim, Gabriel Lemkof, Rafi Shikler, Iris Visoly-Fisher, Eugen Frumker, Yonatan Sivan, Ilan Shalish.
HUJI PIs: Amir Sa'ar and Uriel Levi
Technion PI: Efrat Lifshitz

TAU PI: Gil Markowitz

Weismann: Michael Bendikov (Late) who was replaced by Ronny Neumann

5. June 2013 to June 2018: Sum gross budget of 1000K Shekels for 5 years.
Funding by Mafa't-Tashtiot IMOD
Research topic: Development of the optical system to be integrated with the SWIR to visible up-conversion device.
PI: Gabby Sarusi
6. 2014 Infrastructure Grant: 175M Shekel budget for 4 years of BGU and Soreq NRC to establish the Israeli "Photonic Center"
7. December 2015 to November 2016: Sum gross budget of 440K Shekels for 1 year.
Funding by Kamin, the Chief Scientist Office.
Research topic: "Infrared energy harvesting from hot exhaust using Schottky based PbSe and PbS nano-structure photovoltaic cells"
PIs: Gabby Sarusi and Yuval Golan
8. December 2016 to December 2020: Sum gross budget of 1.04M\$ for 4 years.
Funding by Ram-Group Germany (annual budget of 260K\$)
Research topic: "Ultra-Sensitive Double Ring Resonator Based Optical Bio/Chemical Sensors"
PI: Gabby Sarusi
9. June 2018 to December 2020: Sum gross budget of Part of the above 1.04M\$ for 4 years. Funding by Ram-Group Germany (annual budget of 260K\$)
Research topic: " High Sensitivity room temperature Terahertz sensors based on nano-antenna coupled with GaN/AlGaN HEMT "
PI: Gabby Sarusi

Present Academic Activities

1. SWIR to Visible Upconversion device - FTA program
2. Combining the Upconversion device to Augmented Reality Glasses - Mafa't
3. Infrared energy harvesting - Kamin program
4. Pupil-eye tracker program – Internal program
5. High Energy miniature Yb/YAG and Yb/YLF (Ytterbium-Lithium-Fluoride) lasers
6. Ultra-Sensitive Double Ring Resonator Based Optical Bio/Chemical Sensors - Ram-Group's program, Funded by a Singaporean/ German company.
7. High Sensitivity room temperature Terahertz sensors based on nano-antenna coupled with GaN/AlGaN HEMT funded by Ram-Group's program (Funded by a Singaporean/ German company).
8. 3D Buried waveguides network writing in Silicon using Femto-second laser

Papers accepted, submitted and are under review:

Papers accepted for publication:

Papers submitted:

46. Rotem Dover, Chen Klein, Vitaly Gutkin, Johanna Zessin, Vladimir Saik, Dvir Rotem, Oded Millo, Danny Porath, and Gabby Sarusi "N-type Doping of Single Wall Carbon Nanotubes for Transparent Conducting Cathodes" Submitted to Advanced Materials

Papers in preparation:

47. Arie Grossman, Hadar Manis-Levy and Gabby Sarusi "The role of traps in photocurrent of CBD grown PbS Nano Domain based SWIR detector"
48. Nisim Cohen^S, Yehushua Kalisky^C and **Gabby Sarusi**^{PI} "Comparison of the Performances of Yb:YLF and Yb:YAG Microchip High Peak Power Laser Using Cr:YAG Passive Q-Switch" to be submitted to Journal of laser physics.
49. * Israel Hory^S, Vladimir Vitenberg^S, Ofira Dabah^C and **Gabby Sarusi**^{PI} "Architecture and Simulation of double ring waveguide resonator as a high sensitive chemo and bio sensors"

Papers in preparation:

46. * Nissim Cohen^S and **Gabby Sarusi**^{PI} "Characterization of micro-chip Nd:YAG laser"

• **Synopsis of research, including reference to publications and grants in above lists**

1. FTA and Mafa'at programs:

I intent to finalize these two programs by July 2017 where for the FTA program we have already demonstrated an up-conversion from SWIR to visible of images and videos based on InGaAs absorbing layer and LC-OSLM visible emitting layer. Now we are finalizing the proof of concept to do it in the combination of nano-spheres or nano-columns absorption layer made of PbSe or PbS, respectively and an emission layer of OLED. The main obstacle today is to get the critical photocurrent out of these nano-structures that will be able to achieve the threshold current need to lit the OLED. At the moment we are about one order of magnitude lower. This is due to defects in the nanostructure that serve as recombination centers to the photo-excited carriers. In addition, we still have energy barriers at the interfaces that block the charge carriers and induce more resistivity to the layer structures. In parallel, we have designed the optical layout of the system and produced nearly all the millimeter size lenses. We have also design and are currently producing the mechanical housing of the optics as part of the Mafa'at program. This optics will be attached to an augmented reality glasses that the visible camera imbedded in these glasses will receive the converted visible image and project it on the see through lenses. This is the goal of the program and if we will be able to demonstrate it the overall program will be recognized as a total success. Even if we will not be able to fulfill the entire tasks, still we have achieved many milestones and published tens of papers and we have tens of graduate students for M.Sc. and Ph.D. On this program I have several students in my group and some other students in other PIs groups. Most of the M.Sc. graduate students in my group up to date work on this program and some of them continue to Ph.D. (Elad Hechster and Matan Arbel). I currently have Elad Hechster, Hadar Manis-Levi and Chen Klein working on this topic. The last Ph.D. student Chen is working on achieving a task of transparent cathode made of Graphene and Single wall carbon nanotube.

2. **Infrared energy harvesting by photovoltaic cells made of nanostructured semiconductor and metal junction**

A derivative of this program is the KAMIN program, where we intent to make both heterojunction between the substrate (GaAs or Si) and the nano-structure of a Schottky junction between the nano-structure layer and the covering metal contact. These rectifying junctions will provide a photovoltaic effect to produce electrical current from the absorbed infrared photons. The idea is the take advantage of the heat dissipation from Hybrid cars exhaust pipe to absorb this heat as infrared photons in these infrared photovoltaic cells and the produce current that will charge the Hybrid car batteries. Based on the simulation this can increase car fuel efficiency by 4-5%.

3. **Yb:YLiF high energy microchip laser**

A nice program that is been carried out in my group is related to semi-stable cavity of micro-chip laser. My Ph.D. student Nissim Cohen is developing and investigating an high pulse energy Yb:YLiF microchip laser. The unstable nature of such cavity leads to high energy pulses. The research involves understanding and optimization of the lasing process within this short cavity in order to maximize the output energy per pulse and at the same time prevent any thermal damage to the laser crystal

4. **Eyes pupil tracker**

This engineering program is carried out by my M.Sc. student Maxim Khabad. The main idea is that when illuminating the eye with near infrared LED we can get two reflections, one from the cornea and the second from the eye lens. The distance between them is about 5mm. By recording these two reflections on two CMOS cameras that are positioned in a known parallax distance, we can see a gap open and close between the two reflections. This gap is directly related to the pupil viewing angle (using the correct geometrical model it can be directly calculated when knowing the other parameters such as viewing distance and the distance between the two cameras. We have built a lab system that demonstrate the idea and are currently working on the calculation algorithm.

5. **Ultra-high sensitivity optical biosensors based on optical double ring resonator**

A new program that we are about to get this month is related to ultra-sensitive optical bio sensors, the funding is from a Singaporean/German company called Ram-group that I have good contacts with the founder and the CEO. We are developing several concepts that will include optical ring resonators couple with surfaces that we can induce plasmonic enhancement of the absorption. The idea is to exceed a sensitivity of nano-molar in concentration to detect several known antigens. The ultimate goal from the company's point of view is to have a small kit that can be carried by any person for home use that will be able to accurately predict initial cells of cancer and other disease within the blood. The program is for 4 years and I have already recruited two research assistants and one M.Sc. student that started to work.

6. **Terahertz radiation sensor**

This is a new project funded by Ram Group from Germany aiming to developed a high sensitive sensor for Terahertz radiation. The concept will be based on two approaches: a. A gate engineering of GaN/AlGaN HEMT using micro-antenna

structures b. Floating gate of high polarized material that can induce local electric field on the S-D channel.

7. 3D buried waveguides writing in Silicon using focused and free of aberration Femto-Second laser beam at 1550nm.

Research will be carried out with Dr. Alexander Gusorov and KAMIN Granted

8. Miniature visible and SWIR dual wavelengths camera for smart city applications

Research and development proposal submitted to over sea large firm
